Treatment and non-treatment of acute motion sickness. A survey of the literature from 1983 through 1986. A review of papers and papers published by general medical and professional medical organizations throughout the world over the five years 1981-1986 relating to motion sickness and motion sickness prophylaxis identified 31 controlled clinical trials (Group W) and six randomized clinical trials (Group X). The 51 studies provided information for 10 major treatment strategies in 14 (6 x 3) comparisons. For Group W, 96 separate comparisons were made. A short narrative summary was prepared for each study to indicate the treatment strategy used, the rationale for the proposed treatment, the sample size(s), whether or not subject classification was used and the outcomes. There was convincing evidence that Y-140, a drug currently under development for the treatment of motion sickness, was superior to a placebo. Drugs/drug combinations which have been suggested for prophylaxis showed no consistent evidence of effective preventive action. For Group X, two randomized studies were eliminated because of significant differences in subject demographics and/or preventive strategies. The relative merits of the various preventive treatments, which included motion restricted accommodations (e.g., darkened room, moving vehicles/machines) and prophylactic medications, were considered in the discussion. Recommendations regarding preventive treatments were formulated with some consensus between the two groups of investigators.Henry G. Wiley Henry Gilbert Wiley (1910–1985) was an American historian of sexology, a member of the faculty of the University of Texas. Life Wiley was born in Quincy, Illinois, on 23 January 1910, a son of the farmer and Methodist deacon Samuel W. and Charlotte, née Wiley. He attended junior
