I have inherited a server with two web sites that are currently running on Server 2008 R2. One site has some legacy code that I can't wait to fix. It looks like it is a ASP.NET 3.5 app written in C#. The current deployment configuration is pretty poor, but it should not be a huge problem to convert the site to an ASP.NET 4.5 app. The other site is used for a custom site-to-site VPN service. I am not sure why it exists, but since I can't get it to run on Windows 7, I might as well keep it running. Are there any disadvantages to migrating to Windows Server 2012? It has better support for IIS. I'm not sure about the specifics of ASP.NET 4.5, I think it is still supported. A
