you're not likely to find many libraries that offer so much variety and flexibility, while at the same time sounding so natural, realistic and organic. i won't say i have fallen completely in love with the library since i haven't heard everything, but everything sounds so good that i won't get a chance to. i hope i will not find myself alone when i will have to use all those instruments in the future. all in all i was more than thrilled with the new release and, i have to admit, i had a song idea just with one of the instruments and i'd have included this track in the next audio video. me and ethno world 6 are a match made in heaven. ethno world 6 is definitely a one-drop-in-your-sweet-music-drum-instrument-souvenir. i can really recommend it. for further flexibility, the new ethno world 6 complete supports also the native vst plug-in interfaces. the new version 0.2 also features several new functions: the two new systems «eq-tune» and «note-tune» allow to instantly edit the different tuning, such as the pitch or the basic temperament, and to quickly apply it to the corresponding instrument. each instrument can now be used with different sounding modes. each audio track can be enhanced by lfos, which can be controlled by the sequencer as well as the automation. up to 16 continuous or step lfos can be applied to each instrument and each track. the new system «chord-

tune» makes it easy to modulate tracks, channels and instruments to the played chords. a wide range of additional features have been added to ethno world 6 complete to improve your workflow as well as the workflow in general. one of the new features is the possibility to import/export all patches, instrument presets, lfos, efx presets, track patterns and more to and from other vst instruments or from the vst format.
