figure 2. overview of the regulation of inflammatory arachidonic acid (aa) derivatives after leishmania major or leishmania amazonensis infections. cutaneous leishmaniasis causative parasites (l. major and l. amazonensis) induce the production of aa derivatives with opposite roles, depending on the leishmania species. in l. major infection models (upper panel) the parasite induces the production of pge2 and ltb4. also, the expression of the ep1 and ep3 receptor is increased. the activation of these receptors by pge2 leads to parasite survival. pge2 also increases the release of il-10 by the b1 cells, reducing the phagocytic activity of macrophages. on the other hand, l. amazonensis (lower panel) phagocytosis and killing by macrophages is increased by ltb4 and pge2, and this effect is mediated by the no increase. also, l. amazonensis increase the degranulation of neutrophils, increasing the anti parasitic activity of the immune system.

parallel evaluation mode in maya is enabled by default. you can set the number of worker threads by going to preferences>general>parallel execution > select the number of threads you want to use. for example, if you want to use 16 threads, you would set this value to 16.

adding and editing curves is one of the most common things that users do in maya. an animation curve is a vertex and an attribute connected to a specific vertex. the curve is usually used to control a value of an attribute at a given time. when an animation curve is used as a key, the curve is called a key animation curve.

## New Maya 2018 Activation

if you are using the new maya 2.6 plugin for the maya 2018 api, you need to reset the plugin to get started again. the plugin must be uninstalled completely (using the “uninstall” button on the menu bar, not “remove”) before installing a new copy of the plugin. using the “reset” button does not do this. maya will prompt you to uninstall the plugin after the installation is complete. if you are using the new maya 2.6 plugin for the maya 2018 api, you need to reset the plugin to get started again. the plugin must be uninstalled completely (using the “uninstall” button on the menu bar, not “remove”) before installing a new copy of the plugin. using the “reset” button does not do this. maya will prompt you to uninstall the plugin after the installation is complete. there are new layers in the maya scene browser. newly-created layers can be added to the scene. old layers that are not deleted can be selected in the scene browser. you can delete selected layers from the scene. when testing a deform or analysis tool that involves a large number of simultaneous analysis steps, it is important to allow the tool to use multiple threads. when you click the 3d view button in the viewport toolbar, a dialog box will appear that allows you to specify which thread you want to use. if you are using a single core on your machine, you can enter the number of threads available. for instance, if your machine has 4 cores, you can enter 4 to allow the tool to use all 4 threads. you can also enter the number of cores your machine has when it is running maya and allow the tool to use those available cores. 5ec8ef588b
